Main Function of UNICOR APP

SMART KEYWE

Features to maximize convenience by automatically controlling the door lock when a user enters a house from outside using the user's location information. There are three ways (Nothing, Smart open, Magic Touch) to open the door. You can set-up the distance with user and opening method.

Guest Key

A function to make temporary users of guests, available only for a specified period of time. Temporary users do not need to sign up. You can use the issued authentication number after logging in.

One time use password

Set a password for a door lock that will only be used once. Function that are useful for people who enter or leave on a one-time basis as like delivery service.

- Possible to set in good condition of communication status between bluetooth and door lock.
- The one time use password will be deleted after you use it once.
